

SYSTEM USER GUIDE • VERSION 1.0

CITIZENS Agro Point of Sale System

A complete, role-by-role guide to running the shop on the new system — signing in, billing at the counter, settling at the cashier, inventory and purchasing, customers and credit, finance, payroll and reporting.

PREPARED FOR

CITIZENS Agro
D.S. Senanayake Street, Ampara, Sri Lanka

PREPARED BY

WorthBe (Pvt) Ltd
Software Development & Implementation Partner

About this document

This guide explains how every part of the CITIZENS Agro point-of-sale system works in practice, so that the Owner, the Manager and Counter Staff can operate the shop confidently from day one. It is organised by role and by daily task rather than by technical structure.

VERSION	DATE	PREPARED BY	SUMMARY OF CHANGES
1.0	28 Sep 2026	WorthBe (Pvt) Ltd	First issue — full operating guide covering all seventeen chapters of the delivered system.

● Who this guide is for

The Owner (Super Admin), the Manager, and Sales Staff at the three service counters. Each chapter notes which role a task applies to.

● How to use it

Read Chapters 1–5 once, in full, before go-live. After that, use the Table of Contents to jump straight to the task at hand.

● Related documents

Solution architecture, printer & hardware setup, and the project task log are held separately by WorthBe as technical references and are available on request.

● Support

For questions on any procedure in this guide, or to report an issue with the system, please contact WorthBe through the usual project channel.

CONFIDENTIALITY NOTICE

This document and the system it describes have been prepared by WorthBe (Pvt) Ltd exclusively for CITIZENS Agro. It contains confidential operating procedures and must not be copied or shared outside CITIZENS Agro without WorthBe's written consent.

Table of Contents

Six parts, seventeen chapters — from first sign-in to year-round reporting.

PART I — INTRODUCTION & ACCESS

01	Executive Overview
02	Roles & Permissions
03	Signing In
04	Navigating the System
05	Implementation & Go-Live Sequence

PART II — MASTER DATA & INVENTORY

06	Product Catalog
07	Inventory Management
08	Procurement — Order, Receive, Pay

PART III — POINT OF SALE OPERATIONS

09	A Day at the Counter & Cashier
----	--------------------------------------

PART IV — CUSTOMERS & FINANCIAL MANAGEMENT

10	Customers, Credit, Returns & Quotations
11	Finance & Banking
12	HR, Attendance & Payroll

PART V — INSIGHT & GOVERNANCE

13	Reports & Dashboard
14	System Administration

PART VI — REFERENCE

15	Document Numbering & Statuses
16	Scheduled Jobs & Alerts
17	Troubleshooting Guide

01 Executive Overview

How the shop's daily work maps onto the system, and the rules the system enforces without exception.

CITIZENS Agro operates a **counter-service retail model**. Customers remain outside the shop — the product range includes agro-chemicals, so there is no self-service — and are served at one of **three counters**. All cash is held in a single place: the drawer at the **main cashier**, operated by the Owner or, temporarily, by the Manager.

The system is built around this physical flow. Every other module — catalog, inventory, purchasing, finance, HR and reporting — exists to support it, either by feeding it (stock, prices, customers) or by recording what it produces (sales, cash movements, receivables).

1.1 How the modules fit together

MODULE	PURPOSE	FEEDS INTO
Catalog	Products, units, prices, categories, search vocabulary	POS search, purchasing, stock
Purchasing	Purchase orders → goods received → supplier returns → payments	Stock on hand, amounts owed to suppliers
Inventory	Stock on hand, batches & expiry, adjustments, stocktakes	POS stock indicators, reports, profit
Point of Sale	Billing, settlement, cash drawer, cashier handover	Sales, stock movement, cash
Customers	Credit accounts, payments, returns, quotations	Amounts receivable
Finance	Bank accounts, cheques, expenses, the general journal	The books — posted automatically
HR & Payroll	Employees, attendance, leave, payroll	Salary costs in the books
Reports	29 reports and an owner's dashboard, exportable to Excel and PDF	—

1.2 Principles the system enforces

These are not settings that can be switched off. They are built into how each screen and action works, and they exist to protect the business — every figure in the books can always be traced back to the document that produced it.

FIVE OPERATING RULES

- Stock changes only through a document — a goods receipt, a sale, a return, an adjustment or a stocktake. Every change is written to a permanent stock ledger.
- A printed invoice is **never edited**. A mistake is corrected with a **void** (before settlement) or a **return** (after settlement).
- A posted document — a goods receipt, an adjustment, a stocktake — is **never edited** once posted. Corrections are made with a further document.
- Every transaction that involves money is **posted to the accounting journal automatically**, in the same instant it happens. The Profit & Loss and Balance Sheet are always current.
- Sales Staff **never see cost prices** — not on screen, not in an export, not in a PDF.

02 Roles & Permissions

Three roles, and one temporary authority that can move between two of them.

The system distinguishes between a person's **role**, which is fixed, and **cashier authority**, which is the right to open the drawer and settle invoices, and which can be temporarily handed from the Owner to the Manager (Chapter 9.6).

CAPABILITY	OWNER	MANAGER	SALES STAFF
Bill customers, print and reprint invoices	✓	✓	✓
View stock levels (without cost prices)	✓	✓	✓
Settle invoices, manage the drawer, voids, refunds, approvals	✓	while handed cashier authority	—
Live Billing monitor	✓	while handed cashier authority	—
Manage products, prices, categories	✓	✓	—
Create / submit purchase orders	✓	✓	quantities only
Approve orders, receive goods, manage suppliers	✓	✓	—
Post stock adjustments	✓	up to Rs. 10,000	—
Manage customers and set credit limits	✓	✓	quick-add only, no credit
Banking, cheques, the journal, financial reports	✓	Never	—
Petty-cash expenses from the drawer	✓	✓	—
Employees, payroll, salary advances	✓	Never	—
Attendance	edit	view	own record only
Users, terminals, settings, audit log	✓	—	—

ROLE VS. CASHIER AUTHORITY

A **role** never changes without the Owner editing a user's account. **Cashier authority** moves for a defined period through a formal handover with a cash count at both ends (Chapter 9.6) and can be revoked by the Owner at any moment, even remotely. Finance, payroll and system administration can never be delegated, under any circumstance.

03 Signing In

Two sign-in methods, matched to where they are used.

LOCATION	METHOD
Back office — any computer or phone	Username and password. The Owner should enable two-factor authentication under <i>My Account</i> .
Shop terminals — counters and main cashier	PIN sign-in. This only works on a computer that has already been registered as a terminal (Chapter 14.2).

- The **first PIN sign-in of the day** on a shop terminal also clocks the employee in for attendance purposes. They clock out using the button in the top bar.
- Repeated incorrect PIN attempts temporarily lock that PIN.
- Every sign-in attempt — successful or not — is written to the audit log.
- A computer that is not yet a registered terminal shows *"This device is not a registered terminal."* Signing in with a password and registering the device (Owner only) resolves this.

04 Navigating the System

One consistent menu, and only the parts of it each role is allowed to see.

The left-hand menu is built from the same nine groups for everyone; a group and its pages only appear for a user whose role can open them. This means the menu itself is a quick reference for what a given person can do.

MENU GROUP	PAGES INSIDE IT
Dashboard	Today's figures, alerts and role-based shortcuts
Reports	Every report, each exportable to Excel or PDF
Point of Sale	Billing screen · Cashier · Live Billing · Invoices · Cashier authority · Drawer sessions
Customers	Customers · Credit ageing · Customer payments · Returns · Quotations
Catalog	Products · Categories · Brands · Units · Search synonyms · Taxes
Inventory	Stock on hand · Expiring stock · Stock movements · Adjustments · Stocktakes
Purchasing	Purchase orders · Goods received · Supplier returns · Suppliers · Supplier payments
Finance	Banking · Cheques · Cheque calendar · Expenses · Journal · Chart of accounts · Financial reports
HR & Payroll	My attendance · Attendance · Leave · Employees · Payroll · Salary advances · Allowances & deductions · Shifts, holidays & leave · HR reports
Administration	Users · Terminals · Printers · Print log · Printing test · Settings · Audit log · Go-live

TOP BAR, ON EVERY SCREEN

Product search ( + ) · the notification bell · clock in / clock out · account menu.

05 Implementation & Go-Live Sequence

The recommended order for setting the system up for the first time.

The steps below should be completed in order before the shop begins trading on the system. **Administration** → **Go-live** provides a readiness checklist that verifies most of them automatically.

- 1 **Shop details** — English and Sinhala, invoice footer, receipt language. [Administration → Settings](#)
- 2 **User accounts** for every staff member, each with a PIN. [Administration → Users](#)
- 3 **Terminals** — register the main cashier computer and the three counter computers.
[Administration → Terminals → Register this device](#) (run on each computer)
- 4 **Printers** — link each printer to its terminal and run a test print. [Administration → Printers](#)
- 5 **Categories** (with short-code ranges), **brands** and **units**. [Catalog](#)
- 6 **Tax rates** — only if the shop is VAT-registered. [Catalog → Taxes](#)
- 7 **Products and opening stock**, by Excel import. [Catalog → Products → Import from Excel](#)
- 8 Confirm opening stock was posted. [Inventory → Stock on hand](#)
- 9 **Suppliers and credit customers**, with their opening balances. [Administration → Go-live → Excel import](#)
- 10 **Bank accounts**, with opening balances. [Finance → Banking](#)
- 11 **Employees** — linked to their user login — plus shift hours and holidays. [HR & Payroll](#)
- 12 Staff training, followed by a **parallel run** alongside the existing system before full cut-over.

06 Product Catalog

Setting up the building blocks, then adding products one at a time or by Excel import.

6.1 Building blocks, set up first

PAGE	WHAT TO ENTER	NOTES
Categories	Name, parent category, short-code range	Suggested ranges: Fertilizers 1000–1999, Seeds 2000–2999, Agro-chemicals 3000–3999, Tools 4000–4999, Bicycle parts 5000–6999, Other 9000–9999. A new product receives the next free code in its category's range automatically.
Brands	Name	The Excel import creates any missing brand automatically.
Units	kg, g, litre, ml, piece, bag, packet...	A unit cannot be deleted once it is in use.
Taxes	Name, rate	A "VAT 18%" rate is pre-loaded but kept inactive until confirmed.
Search synonyms	Word groups	e.g. <i>TSP</i> ↔ <i>triple super phosphate</i> , <i>tube</i> ↔ <i>tyre tube</i> — improves counter search accuracy.

6.2 Adding one product

Catalog → Products → New — the product form has five tabs; a red indicator marks any tab containing a validation error.

A.General

Short code <i>(required)</i>	What staff type at the counter, e.g. 1023 . The Suggest button offers the next free code in the category. A deleted product's code is never reused.
SKU / supplier code	Optional reference.
Name, category, brand	English name is required; category is required.
Base unit <i>(required)</i>	The unit in which stock is counted (kg, piece, litre). All stock is stored internally in this unit.
Tax, description, active	Leave tax empty unless VAT applies. An inactive product does not appear at the counter.

B.Units & Prices

- Additional selling units are defined with a conversion factor — e.g. base unit **kg**, with **bag = 50** meaning one bag equals 50 kg of stock.
- A **default sale unit** (offered first at the counter) and **default purchase unit** (offered first on purchase orders) are chosen here.
- Prices are entered per price list — Retail, Wholesale, Farmer-credit — and per unit.
- **Reference cost** and a **minimum margin %** together let the form warn when a price falls below the required margin. Reference cost updates automatically to the latest goods-receipt cost once one exists.
- Every price change is retained in the product's price history and in the audit log.

C.Variants, D.Search & Names, E.Stock settings

FIELD	EFFECT
Variants	A parent product (e.g. a bicycle tyre) can carry variants in different sizes or colours, each with its own code and stock; all variants share the parent's prices.
Sinhala / Tamil name, aliases	The Sinhala name prints on the invoice (English is used if it is left empty); aliases capture the informal names staff actually use, e.g. <code>yuriya, urea bag, u50</code> .
Reorder level / quantity	Triggers the low-stock alert and reorder suggestion.
Track batches / lot numbers	Each delivery becomes its own batch with its own cost; sales draw on the earliest-expiring batch first (FEFO). Used for seeds and chemicals.
Track expiry dates	Expiry is requested on every goods receipt and appears on the Expiring Stock report.

IMPORTANT

A product saved from this form starts with **zero stock**. Stock is added through a goods receipt (Chapter 8.3), a stock adjustment for goods already on the shelf (Chapter 7.4), or the opening-stock column of the Excel import below.

6.3 Adding many products — Excel import

Catalog → Products → Import from Excel

COLUMN	REQUIRED	MEANING
<code>short_code</code>		Leave empty to assign the next free code in the category
<code>name</code>	✓	English name
<code>name_si</code> / <code>name_ta</code>		Sinhala / Tamil names
<code>aliases</code>		Comma-separated informal names
<code>category</code>	✓	Existing category, or Parent > Child
<code>brand</code>		Created automatically if new
<code>base_unit</code>	✓	kg, piece, litre...
<code>sale_units</code>		<code>bag=50; packet=5</code>
<code>retail_price</code> / <code>wholesale_price</code>		Price of the default sale unit; other units are worked out proportionally
<code>reorder_level</code> / <code>reorder_qty</code>		In base units
<code>opening_stock</code>		Stock on hand right now, in base units
<code>cost</code>		Cost of one base unit
<code>batch_no</code> / <code>expiry_date</code>		Lot number and expiry of the opening stock (<code>YYYY-MM-DD</code>)

- 1 Download the template, then complete one row per product.
- 2 Upload it — every row is validated and shown in a preview with any errors flagged per row.
- 3 Correct and re-upload, or confirm the import once the preview is clean. The import is all-or-nothing.
- 4 The import **only adds** new products — an existing short code is treated as an error; use the product form to edit an existing item.
- 5 Opening stock is posted to inventory immediately as an *Opening stock* movement. Any entries left over from an earlier import can be posted from [Inventory → Stock on hand → Add opening stock now](#) .

The full catalog can be downloaded at any time from [Catalog → Products → Export](#) .

6.4 How counter search finds a product

An exact short code always wins (typing [1023](#) adds the item instantly). Failing that, the system runs a typo-tolerant search across the name, aliases, Sinhala and Tamil names, brand, attributes and synonyms, with fast-selling items ranked first; [5*urea](#) adds five units of the first match. Displayed stock is always live. If the search server is temporarily unavailable, the system falls back automatically to a slower database search, so the counter is never left without search.

07 Inventory Management

How stock is tracked, and every way it can legitimately move.

7.1 Key concepts

CONCEPT	MEANING
Base unit	Stock is always held in the product's base unit (e.g. kilograms), to three decimal places. Selling two 50 kg bags removes 100 kg from stock.
Batch	A lot of stock with its own cost and, where relevant, its own expiry date. Batch-tracked products receive one batch per delivery; other products keep a single batch whose cost is a moving average.
FEFO / FIFO	Sales draw from the earliest-expiring batch first; profit is calculated from that batch's cost.
Reserved stock	Stock held against a printed but not-yet-settled invoice. It cannot be sold a second time.
Stock movement	One permanent line in the stock ledger. It can never be edited or deleted.
Negative stock	Refused by default; can be permitted in Settings → Inventory if required.

7.2 Every way stock moves

MOVEMENT TYPE	DIRECTION	CREATED BY
Opening stock	In	Product import (<code>opening_stock</code> column)
Goods received	In	Posting a goods receipt (Chapter 8.3)
Sale	Out	Settlement at the main cashier (reserved at print, issued at settlement)
Sale return	In	A customer return marked to be restocked, back to its original batch
Damage	Out	A return marked as damaged, an expiry write-off, or an adjustment
Return to supplier	Out	A supplier return (Chapter 8.4)
Adjustment (in / out)	Either	A stock adjustment (Chapter 7.4)
Stocktake	Either	Posting a stocktake (Chapter 7.5)

7.3 Inventory pages at a glance

Stock on hand	By product, by batch, or filtered to low stock. The Owner and Manager additionally see stock value. Includes the <i>Add opening stock now</i> action for unposted import stock.
Expiring stock	Batches expiring within 30, 60, 90 or 180 days, with a write-off action.
Stock movements	The complete ledger, filterable by product, type or date; every line links back to its source document.

7.4 Stock adjustments

Inventory → Adjustments → New — used for damage, expiry, loss, found stock, or a simple correction.

- 1 Select a reason — Damaged, Expired, Lost/missing, Found, Correction, or Other — and add a note.
- 2 Add one or more lines: product, variant, batch (optional) and quantity in base units (positive to add, negative to remove).
- 3 Save. The line value is calculated at batch cost.
 - 4 **Up to Rs. 10,000** (configurable in Settings → Inventory): posted immediately.
 - 5 **Above the threshold:** held as *Waiting for approval*; the Owner receives a notification and may approve (posting the stock change) or reject it (nothing changes).

7.5 Stocktakes — physical counts

Figure 7.1 — Any stage before Posted may instead move to Cancelled.

- 1 Start a new stocktake by choosing categories (or all) and adding a note. The system immediately freezes its own quantities as at that moment, one line per batch.
- 2 Count using the tablet-friendly counting page (every entry saves as it is typed) or a printed blind count sheet that does not show system quantities. An empty count is treated as "not yet counted" and left unchanged.
- 3 Move to *Review* to see the differences and their value; *Reopen* allows a recount if needed.
- 4 Post — each difference becomes a stock movement. Differences above the approval threshold require the Owner's sign-off.
- 5 Any stocktake not yet posted can be cancelled.

7.6 Automatic alerts

Every day at **07:00**, the Owner and Manager receive a notification listing products at or below their reorder level and batches nearing expiry. At the counter, a simple colour indicator shows stock status: green (available), amber (low) and red (out of stock).

08 Procurement — Order, Receive, Pay

This is the primary way new stock enters the shop.

8.1 Suppliers

Purchasing → Suppliers holds each supplier's name, contact details and credit terms. The supplier's own page shows their balance, a full ledger of goods received, returns and payments, and a **Pay supplier** action. Opening balances carried over from the previous system are entered through **Administration → Go-live**.

8.2 Purchase orders

- 1 Start a new order, or work from **Reorder suggestions** (items at or below their reorder level, with this supplier's usual products listed first).
- 2 Choose the supplier and add lines. **Sales Staff enter quantities only** and never see cost prices; the Owner or Manager additionally enters unit cost, discount and tax, with the last-used cost pre-filled.
- 3 Submit — the order moves to *Waiting for approval* and the Owner and Manager are notified.
- 4 The Owner or Manager reviews and confirms the costs, then **Approves** the order, or **Rejects** it with a reason, returning it to its creator.
- 5 The order is sent to the supplier as a PDF, or as a secure WhatsApp link the supplier can open without signing in, and then marked **Sent**.
- 6 An order that received nothing may be **cancelled**; one that will not be completed in full may be **closed**.

8.3 Goods Received Notes (GRN)

THIS IS HOW STOCK IS ADDED FROM A DELIVERY

A goods receipt is created either from an approved purchase order (its lines are pre-filled from what remains outstanding) or directly, with no purchase order behind it.

FIELD	MEANING
Qty	Quantity paid for, in the chosen unit
Free	Free / bonus goods — these lower the batch's unit cost
Unit cost	Cost per unit, entered by the Owner or Manager
Lot no. / Expiry	Required for any product tracked by batch or expiry

A delivery cannot exceed what remains outstanding on a purchase-order line; any surplus is entered as free quantity or as a separate line. Saving creates a *Draft* receipt — stock is not yet affected, and the draft may still be edited.

Posting the receipt, in one step:

- adds the stock (paid plus free quantity), creating a new batch per line for batch-tracked products;
- sets the batch cost as the line total after any receipt discount, divided across all units received — so free goods reduce the effective cost;
- updates the product's reference cost to match;
- moves the related purchase order to *Partly received* or *Received*;
- increases the supplier's balance by the receipt total; and
- posts the corresponding entry to the accounting journal automatically.

ONCE POSTED, NEVER EDITED

A draft receipt may be cancelled outright. A **posted** goods receipt can never be edited — a mistake is corrected with a supplier return, followed by a new goods receipt if required.

8.4 Supplier returns

A return is created against a specific supplier and the exact batch the goods came from. On saving, it posts immediately: stock leaves that batch; the supplier's balance is reduced at the original buying price (the receipt price net of its discount, or the supplier's last price if unavailable); and any difference against the batch's stock cost is booked as a stock gain or loss.

8.5 Supplier payments

Owner only. Payments may be made from the drawer, from cash held at home, by bank transfer, or by cheque, and are applied to the supplier's unpaid receipts oldest-first (or as chosen manually); any surplus is retained as an advance. A cancelled or bounced cheque reinstates those receipts as unpaid.

09 A Day at the Counter & Cashier

Opening the drawer, billing, settlement, and closing the day.

9.1 Opening the day

- 1 The Owner signs in with a PIN at the main cashier computer.
- 2 Under **POS → Cashier → Open drawer**, the morning float is counted by denomination and entered.
- 3 Counter staff sign in with their PIN at Counters 1–3, which also clocks them in.

9.2 Billing at a counter

KEY	ACTION
F2	Focus the search box (it is focused by default)
↑ ↓ Enter	Select a result and add it to the bill
5*urea	Add a quantity of five directly from search
+ / - DeL	Adjust or remove a line
F4	Select or quick-add a customer
F6	Enter amount tendered
F7	Save as a quotation (or, on an empty bill, load an open quotation)
F8	Hold or recall a bill
F9	Print the invoice
F10	Reprint the last invoice, marked COPY
Esc	Clear the bill

- 1 Add items by search, favourites, recent items, or category tiles; switch units on a line where needed.
- 2 Apply discounts per line or for the whole bill. A discount above the staff limit is sent to the cashier as an approval request and must be granted before printing.
- 3 State the total to the customer, take payment, and select the method — Cash (with tendered amount and a large balance display), Card, Bank transfer, Cheque, or Credit (which requires a selected customer).
- 4 **F9** re-prices every line on the server, reserves the stock, assigns the next invoice number, and prints the Sinhala invoice on that counter's printer.
- 5 The invoice and the cash are carried to the main cashier.

9.3 Settlement at the main cashier

The cashier screen shows one live column per counter, with the bill being built in real time and any printed invoices awaiting settlement.

Settle	Checks the invoice and money, then commits: stock is issued on a first-expiry-first-out basis, payment is recorded in the drawer session, and the cash drawer opens. Credit settlements display the customer's balance and limit; exceeding the limit requires the Owner's explicit approval and cannot be granted by a delegated Manager.
Find	Locates an invoice by its last digits.
Void	Cancels an unsettled invoice with a reason; the counter may re-bill. Voided invoices retain their number and display as VOID. An invoice already settled, or with payments or returns applied, cannot be voided — a return is used instead.
Approvals	Approve or reject pending discount requests from the counters.

9.4 Drawer movements

From the cashier screen: **Pay in** (float brought from home), **Pay out** (cash taken by the Owner), and **Safe drop** (cash returned home). Petty-cash expenses are recorded through [Finance → Expenses](#).

9.5 Closing the day

- 1 Closing is blocked while any invoice remains unsettled.
- 2 The drawer is counted by denomination; expected and counted amounts are compared and any variance is recorded.
- 3 A Z-report prints, showing sales, voids, customer payments and refunds by counter.
- 4 The counted cash is taken home; it becomes the following morning's opening float.

9.6 Handing cashier authority to the Manager

- 1 The Owner selects **Hand over** at the main terminal and counts the drawer; their session closes.
- 2 The Manager enters their PIN and a matching count, together with an expiry time and scope; their session opens.
- 3 The Manager may now settle, void, refund, approve requests and view Live Billing — but never finance, payroll or administration.
- 4 On return, the Owner selects **Take back**, confirmed with a further count and their PIN.
- 5 Authority can be revoked instantly — even remotely, from a phone — and expires automatically at the agreed time regardless.

9.7 Live Billing

The same three columns, view-only, available on the Owner's dashboard or phone. Items removed after being added, cleared bills, reprints and voids are all highlighted for loss-prevention purposes.

10 Customers, Credit, Returns & Quotations

Farmer credit accounts, receivables, and how a sale is unwound when necessary.

TASK	WHERE	NOTES
Add a customer	Customers → New, or F4 at the counter	Quick-add captures name, phone and village with no credit. Phone numbers must be unique; only the Owner or Manager set credit limits, terms and price list.
Credit sale	Counter: F4 → Credit → F9	Posts to the customer's account on settlement , due after their agreed credit days.
Customer payment	POS → Cashier → Customer payment	Applied oldest-invoice-first, or as chosen; any surplus is kept as an advance. A Sinhala receipt is printed.
Statement	Customer page → Statement PDF	Available in Sinhala or English.
Credit ageing	Customers → Credit ageing	A daily notification at 07:05 flags overdue balances.
Return	POS → Cashier → Return	Main terminal only, always against the original invoice. Each line is restocked to its original batch or written off as damaged; the refund is cash from the drawer or credit to the account.
Quotation	Counter: F7	Reserves no stock; valid for 7 days; billed at the day's prices when converted.

11 Finance & Banking

Owner-controlled, and posted automatically from everywhere else in the system.

Access is restricted to the Owner, with one exception: the Manager may record petty-cash expenses from the drawer. Every sale, payment, goods receipt, adjustment and drawer action posts to the accounting journal automatically — no journal entry is ever typed by hand.

Banking	Balances for every bank account, cash held at home, the drawer, and cheques in hand. Bank accounts carry an opening balance and their own transaction book. Move money transfers between home, bank and drawer; Reconcile checks the book against a statement.
Cheques	Received cheques originate from settlement or customer payments; issued cheques from supplier payments. Each moves through Deposited → Cleared / Bounced / Cancelled; post-dated cheques cannot be deposited early. A daily reminder is sent at 07:10.
Expenses	Recorded with a photo or PDF of the bill, paid from the drawer, cash at home, or a bank account. Cancelling an expense reverses it.
Journal & Chart of Accounts	A read-only view of the underlying books.
Financial reports	Profit & Loss, Balance Sheet, Trial Balance, and the Cash Book.

CARD & TRANSFER TAKINGS

Card and bank-transfer payments taken at settlement wait under *Card & transfer payments* until the Owner moves them into the correct bank account.

12 HR, Attendance & Payroll

From a PIN sign-in each morning to an approved, paid payslip each month.

TASK	WHO	HOW
Clock in	Everyone	First PIN sign-in of the day at a shop terminal, or the Clock in button
Clock out	Everyone	Button in the top bar
My attendance & leave requests	Everyone	HR & Payroll → My attendance
Attendance sheet / month grid	Owner edits, Manager views	Clicking a day allows a correction, which requires a reason and is audited
Leave approval	Owner	HR & Payroll → Leave
Employees	Owner	Each employee is linked to their user login
Shifts, holidays, leave types	Owner	Default shift 08:00–18:00; late after a 10-minute grace period
Salary advances	Owner	Paid from the drawer, home cash, or a bank; recovered in equal monthly instalments
Payroll	Owner	Choose the month → Calculate → review/edit each payslip → Approve → Pay → record EPF/ETF paid. Payslips are produced as a PDF in Sinhala and/or English.

Standard rules (configurable under Settings → HR & Payroll): EPF at 8% (employee) + 12% (employer), ETF at 3%; overtime at 1.5× the hourly basic rate, calculated from 240 working hours per month and counted from 30 minutes past closing. A working day with neither a clock-in nor approved leave is treated as unpaid absence.

13 Reports & Dashboard

A live view of the business, and twenty-nine reports behind it.

13.1 The Owner's dashboard

Net sales today (with a per-counter breakdown), invoices awaiting settlement (flagged amber past 10 minutes), expected cash in the drawer, who currently holds cashier authority (with an instant **Revoke** option), pending approvals, stock alerts, purchasing to action, cheques due, receivables and payables, the top ten items of the last 30 days, and a sales-by-hour chart. The Manager's view is limited to sales, stock and purchasing; Sales Staff see shortcuts and stock alerts only.

13.2 Report library

CATEGORY	REPORTS INCLUDED
Sales	Daily summary / Z-report, by item, category, brand, counter, staff, customer and hour; discounts given; settlement waiting time
Loss prevention	Removed items & voids by counter, removed items & cleared bills, reprints, discounts above the staff limit
Profit Owner	By item, category, and day, at FIFO cost
Inventory	Stock on hand & valuation, stock by batch, movement history, expiry, dead stock, reorder list, adjustment & stocktake variance
Purchasing	By supplier, by item, open orders, supplier ageing
Customers	Receivables ageing, credit sales
Cash & finance	Drawer sessions & variances, handover history, expenses, P&L, balance sheet, trial balance, cash/bank book, cheque register
Audit	Price change history, user sign-ins

A sale is counted on the day it was **settled**. Exports over 5,000 rows are produced in the background and announced via the notification bell; exports over 3,000 rows suggest Excel in place of PDF.

14 System Administration

Users, terminals, printers, settings, and the audit trail — all Owner-only.

AREA	SUMMARY
Users	Name, username, role and PIN. An inactive user cannot sign in by any method.
Terminals	Four registered terminals: the main cashier and Counters 1–3. Each computer is bound with a secure cookie after registration; only a registered terminal allows PIN sign-in, and only the main terminal can settle invoices.
Printers	One 80 mm thermal printer per terminal, with the cash drawer wired to the main printer only. Includes a test-print action, a full print log, and the ability to reassign a printer if one fails.
Settings	Shop details, invoice layout, tax, POS rules (staff discount limit, waiting-invoice alert), inventory (negative stock, the Rs. 10,000 adjustment-approval threshold), customer credit rules, finance and HR/payroll parameters.
Audit log	Every price change, discount, void, reprint, removed cart item, adjustment, handover, attendance correction and sign-in attempt.
Go-live	The readiness checklist, plus the Excel import for credit customers and suppliers with their opening balances.

15 Document Numbering & Statuses

Every document the system produces, its numbering pattern, and the statuses it can pass through.

DOCUMENT	NUMBER FORMAT	STATUS FLOW
Invoice	INV-2026-000001	On hold → Invoiced → Settled / Void → Partially returned / Returned
Purchase order	PO-...	Draft → Waiting for approval → Approved / Rejected → Sent → Partly received → Received → Closed / Cancelled
Goods received	GRN-...	Draft → Posted / Cancelled
Supplier return	SRN-...	Posted on save
Stock adjustment	ADJ-...	Posted, or Waiting for approval → Posted / Rejected
Stocktake	STK-...	Open → Counting ↔ Review → Posted / Cancelled
Customer	C-00001	Active / Inactive
Customer payment	RCP-...	—
Sale return	RET-...	—
Quotation	QT-...	Open → Converted / Expired / Cancelled
Journal entry	JE-...	Never edited, only reversed
Expense	EXP-...	Cancel reverses it
Supplier payment	SP-...	—
Employee / advance	E-001 / ADV-...	—

16 Scheduled Jobs & Alerts

Background tasks that keep the system current. These require the server's scheduler to be running at all times.

TIME	JOB
Every minute	Cashier-handover expiry check
07:00	Low stock and expiry alert
07:05	Overdue customer credit notification
07:10	Cheques ready to deposit / issued cheques due
07:15	Yesterday's missing clock-outs
02:50	Rebuild of report summaries (last 40 days)
Nightly	Sales-velocity recalculation, pruning of counter activity older than 90 days, and system backups

17 Troubleshooting Guide

Quick answers to the situations most likely to come up in daily use.

SYMPTOM	RESOLUTION
PIN sign-in unavailable / "not a registered terminal"	Sign in with a password, then register the device under Administration → Terminals.
"These credentials do not match our records"	Check the username (not an e-mail address), caps lock, and that the account is active. Retry in a private browser window.
Manager cannot settle invoices	Cashier authority must be handed over first, and the Manager must be at the main terminal.
Drawer will not close	An invoice is still awaiting settlement — settle or void it first.
"Not enough stock" when printing an invoice	Check Stock on hand; post the relevant goods receipt or an adjustment. Negative stock is disabled by default.
Imported products show zero stock	Run Inventory → Stock on hand → Add opening stock now.
A posted goods receipt is incorrect	Posted receipts cannot be edited. Record a supplier return for the incorrect quantity, then a new receipt if required.
Adjustment stuck at "Waiting for approval"	Its value exceeds Rs. 10,000; the Owner approves it from the notification bell or Inventory → Adjustments.
Search is briefly slow	The search server is temporarily unavailable and the database fallback is in use; restart the search service.
The whole site shows a server error	The cache/queue service is not running; restart it.
An invoice opens a print dialog instead of printing silently	Chrome is not running in kiosk-printing mode, or the wrong default printer is selected on that computer.
Live Billing updates only every few seconds	The real-time service is not running; the system has fallen back to polling, which is expected behaviour in that case.
